Invitation to take part

We would like to invite you and your daughter to join the SOAR study! The SOAR study aims to improve our understanding of the behaviour, development and wellbeing of girls and women with Turner Syndrome. We're especially interested in social skills, friendships and relationships, as we know that these areas are of great concern to parents as their daughters grow up.

The SOAR study is led by Prof David Skuse, who has worked closely with the TSSS since its foundation and has over 20 years research and clinical experience working with Turner Syndrome families.

Taking part in the SOAR study involves filling out some online questionnaire about your child's behaviour from the comfort of your own home. After participating you will receive a personalised summary report which you may find useful when your child is undergoing assessment for services, benefits or specialist treatment.

“ Having taken part in a previous study with Prof Skuse and his team when Kylie was younger, I found it worthwhile and gave me a greater understanding of some of the difficulties she faced. Please take the time to take part in this study as it could lead to new insight and understanding of TS. ”

Arlene Smyth, Executive Officer, TSSS
